

Easy Booking Application Report

This application provides services for finding and booking hotels. One of the main functions of this application is to display a database with the names of various hotels. The application provides the ability to add data to the table and save changes.

When creating the application, the following headers and source files were used:

The first dialog box is equipped with a Search button through which you can start the application and an About button through which you can view the logo.

Using the Load button, the dataset is uploaded to the table. This table can also be modified. For example, when you click the Add button, the user is taken to a new dialog box that contains a form for submitting new data to a table row. In addition, you can sort data by columns by highlighting them.
